## **Editor**

Miroslav BADIDA

Ľubomír ŠOOŠ

**Bratislava, 2021**

# **Analysis of the State, Forecasts and New Technologies of Waste Recovery in the Automotive Industry**

UNIVNET – University and Industrial Research and Education Platform of the Recycling Society

## **Members of the UNIVNET association:**

Slovak University of Technology in Bratislava  
University of Economics in Bratislava  
Technical University of Košice  
University of Žilina  
Technical University in Zvolen  
Automotive Industry Association of the Slovak Republic

**Editors:** **Dr.h.c. mult. prof. Ing. Miroslav Badida, PhD.**  
**Dr.h.c. prof. Ing. Ľubomír Šooš, PhD.**

**Reviewers:** **prof. Ing. Dušan Šebo, PhD.,**  
*SEBEX Slovakia, s.r.o., Košice, (SK)*  
**prof. Mgr. Juraj Ladomerský, CSc.,**  
*European Science and Research Institute, Zvolen, (SK)*  
**prof. Ing. Vladimír Hlavňa, PhD.**  
*Nám. Ľ. Fullu 14, 010 08 Žilina District: Žilina, (SK)*

**Cover design:** **Ing. Tibor Dzuro, PhD.,**  
*Technical University of Košice, Faculty of Mechanical Engineering,  
Institute of Management, Industrial and Digital Engineering,  
Department of Environmental Engineering*

**Technical adaptation:** **Ing. Tibor Dzuro, PhD.,**  
*Technical University of Košice, Faculty of Mechanical Engineering,  
Institute of Management, Industrial and Digital Engineering,  
Department of Environmental Engineering*

**Published by:** RAM - Verlag, Germany

**ISBN:** **978-3-96595-008-5**

UNIVNET, Bratislava, October 2021

# Analysis of the State, Forecasts and New Technologies of Waste Recovery in the Automotive Industry

## TABLE OF CONTENTS

<b>INTRODUCTION .....</b>	<b>9</b>
<b>About UNIVNET .....</b>	<b>11</b>
<b>1 The Current State of Processing Capacity and the Development of New Technologies for Waste from Old Vehicles .....</b>	<b>14</b>
1.1 Introduction .....	14
1.2 Current annual capacities of old vehicle processors .....	15
1.3 Level of processing – recovery of waste .....	16
1.4 Waste stream for recyclable materials – customers .....	19
1.5 Waste stream for hazardous waste – customers .....	20
1.6 Materials intended for landfill sites that cannot be ecologically recovered .....	20
1.7 Cooperation with OZV (producer responsibility organisations) .....	21
1.8 Economic efficiency of old vehicle processing – conditions for its achievement .....	22
1.9 Comments on the related legislation .....	26
1.10 Recommendation .....	26
1.11 Annex No. 1 Processor survey sheets .....	27
1.12 Bibliography .....	27
<b>2 Adaptation of Economies to Innovative Technological and Material Changes in the Automotive Industry .....</b>	<b>29</b>
2.1 Introduction .....	29
2.2 Impacts of the automotive industry on the structure of the economy and supply sectors in SR .....	30
2.2.1 Basic structural relations .....	31
2.3 Key structural changes with regard to car production in the Slovak Republic in 2013 and 2017 .....	33
2.4 Innovation potential of the automotive industry in the Slovak Republic .....	35
2.5 Potential waste streams from the processing of end-of-life vehicles and from the operation of cars for the circular economy of the Slovak Republic .....	37
2.5.1 Waste management potential from the processing of old vehicles .....	38
2.5.2 Waste management potential and waste streams from vehicle operation .....	42
2.6 Potential for the reduction of waste from the production, operation and processing of ELV in relation to the environment .....	44
2.7 Conclusion .....	46

2.8	Bibliography .....	48
<b>3</b>	<b>“SmartOdpady” – Integrated Tool for Green and Sustainable Waste Management.....</b>	<b>52</b>
3.1	Automotive industry and waste management – the beginning of symbiosis?.....	52
3.2	Slovakia and material streams in the context of the circular economy.....	52
3.3	SmartOdpady integrated platform as a support tool for the waste recovery .....	57
3.4	SmartOdpady integrated platform – subsystem of Innovations.....	63
3.5	Conclusion .....	65
3.6	Bibliography .....	66
<b>4</b>	<b>Design of a Modular Technological Line for the Recycling of Laminated Car Glass.....</b>	<b>69</b>
4.1	Introduction .....	69
4.2	Theoretical baseline of the designed recycling process of laminated bonded glass .....	70
4.3	Analysis of the current recovery technologies of bonded sheets of glass.....	71
4.4	Laboratory analysis of known technologies .....	71
4.5	Laboratory research .....	72
4.6	Execution of experiments .....	73
4.7	Evaluation of the experiments and analysis of the results .....	81
4.8	Functional vibration tests.....	83
4.9	Design of functional modules.....	86
4.10	Conclusion .....	89
4.11	Bibliography .....	91
<b>5</b>	<b>Industrial Recycling End-of-life Electric Vehicles Lithium-ion Batteries .....</b>	<b>93</b>
5.1	Introduction .....	93
5.2	Procedures for the processing of discarded Li accumulators .....	94
5.2.1	Retriev technology .....	94
5.2.2	Sumitomo–Sony technology .....	95
5.2.3	Recupyl technology .....	95
5.2.4	Akkuser technology.....	95
5.2.5	Umicore Valéas™ technology.....	96
5.2.6	BatRec technology.....	96
5.2.7	Inmetco technology .....	97
5.2.8	Accurec technology.....	97
5.2.9	Battery Resources technology .....	97

5.2.10	LithoRec technology .....	98
5.2.11	OnTo technology .....	99
5.2.12	Summary of industrial LiA recycling processes .....	99
5.3	Material recycling of the discarded Li accumulators.....	103
5.3.1	Discharging of the residual voltage from the discarded Li accumulators .....	104
5.4	Summary and conclusion.....	108
5.5	Bibliography.....	110
<b>6</b>	<b>Use of Secondary Raw Materials from Old Vehicles in the Production of Acoustic and Thermal Insulators .....</b>	<b>112</b>
6.1	Introduction .....	112
6.2	Materials and fractions extracted from recycling processes.....	112
6.3	Production technologies of sound absorbing materials or elements .....	117
6.3.1	Production technology of sound absorbing elements from tyres.....	117
6.3.2	Production technology of sound absorbing elements from soft foam (polyurethane foams) .....	121
6.4	Development and research of the acoustic properties of materials.....	123
6.4.1	Selection of materials for the experimental part .....	123
6.4.2	Preparation of test samples .....	123
6.4.3	Measurement methodology of the selected acoustic descriptors.....	124
6.4.4	Instrumentation, software, and other equipment.....	124
6.4.5	Results and use of the materials in practice.....	125
6.5	Design of products made on the basis of bulk granulates .....	128
6.5.1	Design of test boxes for measuring the acoustic properties of bulk materials.....	129
6.5.1.1	Design of test boxes using a 3D printer .....	130
6.5.1.2	Design of test boxes using a CNC machine tool.....	131
6.5.1.3	Design of the filling device for the test boxes intended for the measurement of acoustic properties of bulk materials.....	131
6.6	Conclusion .....	133
6.7	Bibliography.....	134

<b>7</b>	<b>Analysis of Processing and Use of Waste Rubber and Plastics from the Automotive Industry and Assessment of Their Ecotoxicity .....</b>	<b>138</b>
7.1	Description of the research project .....	138
7.2	Objectives of the research project .....	139
7.3	Material and measurement methods .....	139
7.3.1	Material .....	140
7.3.2	Experimental processing methods .....	141
7.4	Results and evaluation .....	146
7.4.1	Stress-deformation analysis of the crusher .....	146
7.4.2	Business plan concept of rubber-based noise protection panel production ...	150
7.4.3	Ecotoxicological properties of tyres .....	154
7.4.4	Biodegradation of waste-crushed tyres .....	155
7.4.5	Tertiary and quaternary recycling of the selected plastic materials and rubber from tyres .....	155
7.5	Conclusion .....	156
7.6	Plan for the year 2021 .....	156
7.7	Bibliography .....	158
<b>8</b>	<b>Progress in the Field of Solutions for Energy Recovery of Waste from the Automotive Industry .....</b>	<b>161</b>
8.1	Introduction .....	161
8.2	Incineration and co-incineration .....	162
8.2.1	Waste incineration possibilities .....	163
8.2.2	Solid alternative fuel (TAP, TDP) .....	165
8.2.3	Results of the experimental measurements of TAP incineration .....	166
8.3	Gasification and pyrolysis .....	171
8.3.1	Gasification .....	171
8.3.2	Pyrolysis .....	172
8.4	Conceptual design of a device for the energy recovery of waste from the automotive industry .....	173
8.4.1	Technologies necessary for gasification and pyrolysis .....	175
8.4.1.1	Crushing, transportation, and dosing equipment .....	175
8.4.1.2	Gasification and pyrolysis equipment .....	176

8.4.1.3	Devices for the treatment and use of the synthesis gas .....	176
8.4.2	Conceptual design of a small complex device for the energy recovery of plastic waste.....	177
8.4.3	Experimental reactor .....	178
8.5	Conclusion .....	181
8.6	Bibliography .....	182
<b>LIST OF FIGURES .....</b>		<b>183</b>
<b>LIST OF TABLES .....</b>		<b>188</b>
