

TABLE OF CONTENT

CHAPTER I. PRINCIPLES OF PLASTICIZING AND MIXING

1. Constructional methods of increasing the plasticating efficiency.....	7
2. Virtualization of the process polymers processing in the single screw extruder	19
3. Construction and development of twin-screw-extruders using alternative gear-drive-technology.....	30
4. Features of rolling machines and processes for obtaining polymer compositions	40
5. Analysis of the screw plasticizing process based on computer simulation	53
References	65

CHAPTER II. BLENDS AND COMPOSITES

1. The methods of flame retarding of the thermoplastic composites and polymer mixtures	71
2. Basics of nanotechnology and polymer nanocomposites	83
3. Analysis of cross-linking in processing automotive interior parts made of plastics	102
4. Influence of mineral fillers on polypropylene mechanical properties	115
5. Application of clay based nanofillers at polymers nanocomposites.....	127
References	140

CHAPTER III. PROCESSING AND RECYCLING

1. Production and selected properties of porous extruded products.....	149
2. Analysis of microcellular extrusion of modified polymer materials	159
3. Influence of regrind on properties of thermoplastics used in automotive industry	171
4. Tool steels for injection forms and adhesive wearing of selected tool steels.....	184
References	198
